

RSV CAN HIT BABIES HARD. PROTECT YOUR LITTLE ONE.

RSV SPREADS
FAST AND CAN BE
SERIOUS FOR BABIES,
ESPECIALLY UNDER
6 MONTHS.

Look out for:

- Trouble feeding
- Unusual tiredness or fussiness
- Wheezing or pauses in breathing

THE BEST
PROTECTION IS
PREVENTION.

RSV vaccine during pregnancy =
6 months of protection from birth¹

Antibody treatment after birth
= 5 months of defense¹

YOU
CAN HELP
STOP THE
SPREAD:

Wash hands. Disinfect
surfaces. Keep sick people
away from babies.

**YOUR BABY CAN'T
FIGHT RSV ALONE.
TALK TO YOUR
DOCTOR TODAY.**
