

Share your vaccine resources with a national audience

What is the Vaccine Resource Hub?

The [Vaccine Resource Hub \(VRH\)](#) is a trusted collection of free, culturally relevant, science-based materials that support vaccine communications and outreach. It is part of the [Health Communications Initiative](#), which helps make accurate health information easy to find, share, and use.

Why submit your content?

Sharing your materials with the VRH helps you:

- **Reach trusted community-based organizations** that may not already be aware of your content—extending your impact to new audiences and local networks.
- **Increase credibility** by featuring your materials on a trusted national platform curated for cultural relevance and scientific accuracy.
- **Amplify your efforts** by making it easier for others to discover, adapt, and use your content in the communities they serve.

What type of content can be submitted?

All resources on the VRH show attribution to the organization that created them. Most are unbranded, so others can use and adapt them freely without needing to include that attribution in their own materials. We welcome public-facing, evidence-based resources, including:

- Fact sheets and flyers
- Infographics
- Short videos
- Social media graphics and posts
- Toolkits and guides

How does it work?

Submitting is simple:

1. Confirm your materials are public-facing and accurate.
2. Send them via the online submission form.
3. The VRH team reviews, tags, and posts them so others can find and use them.

Join a growing network

Contribute alongside health departments, nonprofits, community organizations, and academic partners working to share clear, practical vaccine information.

**Ready to share
your resources?**

Submit them here

Stay connected

Sign up for the VRH newsletter—available in English and Spanish—to get timely insights on vaccine conversations, updates on newly added resources, and talking points you can use in your outreach.
